

CAR COMPANY SPEEDS PRODUCTION BY 75 PER CENT

Briggs Automotive Company protects its intellectual property while improving productivity enterprise-wide with a next-generation firewall and wireless access points

Business need

As Briggs Automotive Company grew, it needed a more secure way to enable communication and collaboration than using email and Dropbox to share documents, which frequently included valuable intellectual property. It also needed a better wireless solution to enable manufacturing staff to access design specifications and other materials.

Solution

With a SonicWall TZ 215 next-generation firewall and SonicPoint wireless access points, BAC now has both comprehensive protection and reliable access to its data. As a result, not only is its IP safe, but manufacturing is 75 per cent faster and employees enterprise-wide are more productive.

Benefits

- IProtected the business and its IP with advanced wired and wireless network security
- Increased manufacturing speed by 75 percent by ensuring easy access to design schematics and other data
- Improved productivity enterprise-wide by enabling easy and secure collaboration
