

STUDENTS ARE ASSURED OF INTERNET SAFETY

Aspire Chiltern Skills and Enterprise Centre provides its pupil referral unit students with safe and flexible internet access with a next-generation firewall and receives 100 percent ROI.

Business need

Aspire needed a firewall at its new Chiltern Skills and Enterprise Centre. The local authority had overlooked the need for internet access at the centre, so there was not sufficient time for its approved internet provider to install a solution. A swifter alternative was needed, that would protect its vulnerable students from internet security threats.

Solution

With a SonicWall NSA 3600 next-generation firewall, Aspire CSEC is now assured of safe internet access for its students and staff, and that its network is protected against security breaches. The impact on firewall admin time is minimal, and as a result, full ROI has been delivered.

Benefits

- Delivered the protection needed for safe internet access for students and staff
- Provided protection of network against security breaches
- Offered a flexible approach to content filtering
- Ensured firewall admin time is kept to a minimum
- Achieved 100 percent ROI
