USE CASE SCENARIO

A typical retail network might deploy a SonicWall enterprise-class firewall at a central site, plus entry-level firewalls at branch locations, each securely connected via site-to-site VPN. SD-WAN lowers costs by replacing expensive MPLS with cost-effective broadband options such as Ethernet, DSL and 3G/4G. TZ300P or TZ600P firewalls support Power over Ethernet (PoE)-enabled wireless access points, IP phones, cameras, etc., without a PoE switch. Capture Security Center provides single-pane-of-glass management of security, networking and wireless policies.

SONICWALL BENEFITS FOR RETAIL
