

BIFFL SECURES DISTRIBUTED FINANCIAL NETWORK AT GIGABIT SPEEDS

SonicWall High-End Firewalls deliver ease, affordability and reliability.

Business need

Bangladesh Infrastructure Finance Fund Limited (BIFFL) is a Government-owned non-banking financial institution. Its distributed network supports a variety of web-based services, including outbound and inbound traffic. BIFFL needed to protect its network from unauthorized external users, hackers and malware, including ransomware and zero-day threats. It also needed to ensure secure interbranch connectivity via the public cloud, and block access to unapproved websites.

Solution

BIFFL selected SonicWall High-End Series Firewalls. Reassembly Free Deep Packet Inspection (RFDPI) technology and massively multi-core, highly scalable hardware architecture delivers industry-leading application control, intrusion prevention, malware protection, TLS/SSL decryption and inspection, URL inspection, and application control at multi-gigabit speeds.

Results

SonicWall immediately reduced staff time spent mitigating cyberattacks. Robust dashboard and reports have provided deep insight into traffic and applications, which informed the creation of rules to control inappropriate user browsing. With SonicWall, BIFFL can now control and monitor its security with a single core firewall and don't have to spend as much time mitigating malware or bandwidth issues.

Benefits

- Easy, affordable, reliable, and trustworthy
- Segments and protects network from inappropriate content, applications & malware
- Transparent traffic monitoring and management of untrusted devices
- Highly responsive support
