

# Integration Guide

## Configuring TOTP (Multi-Factor Authentication) Using Google Authenticator on SonicWall® Next Generation Firewalls

April 2019

This document describes how to configure time-based, one-time password (TOTP), multi-factor authentication. It focuses on using Google Authenticator with SonicWall next generation firewalls.

### Topics:

- [Authentication Overview](#)
- [System Requirements](#)
- [Managing 2FA in SonicOS 6.5](#)
- [Authenticating with the Firewall](#)

## Authentication Overview

### Topics:

- [About TOTP](#)
- [About Google Authenticator](#)
- [SonicOS Options](#)

## About TOTP

The time-based, one-time password (TOTP) is a multi-factor authentication scheme that utilizes an algorithm to generate a one-time code. TOTP is an alternative to traditional two-factor authentication methods. The TOTP password keep changing and is valid for 30 seconds at a time. Because the TOTP password changes frequently, it is considered more secure than a standard OTP solution.

Several third parties have password applications that you can integrate into your SonicWall infrastructure. These include Microsoft Authenticator, Google Authenticator, and Duo Mobile, for example. This document focuses on Google Authenticator.

## About Google Authenticator

By using Google Authenticator, you can help strengthen your account security by generating verification codes on your phone. The Google Authenticator requires a second step of verification when you sign in. In addition to our password, you need the code generated by Google Authenticator on your phone.

## SonicOS Options

Starting with SonicOS 6.5.3, SonicWall provides several options for managing password authentication:

- **Disabled:** no password authentication is required.
- **OTP via email:** one-time password (OTP) authentication is verified one time through email. The user gets a temporary password, by email, after they log in with their regular user name and password. Once they input the password from their email, the login process completes.
- **TOTP:** a time-based, one-time password (TOTP) is used with two-factor authentication (2FA). To take advantage of two-factor authentication, users must download a TOTP client application, such as Google Authentication, on their smartphone.

## System Requirements

To take advantage of the two-factor authentication, you should have a SonicWall Next Generation Firewall running SonicOS 6.5.3 at a minimum.

Before enabling two-factor authentication on the firewall, Google Authenticator must be setup on the user's Google account. For information on how to set up the application for users, refer to the information available at [Google Authenticator](#).

## Managing 2FA in SonicOS 6.5

To set up the authentication you have to work in both SonicOS and in Google Authenticator. The following outlines the general steps:

- 1 Create or setup a user on the firewall with the **TOTP** option as described in the following sections:
  - [Adding a New User with 2FA](#)
  - [Editing 2FA for a User](#)
  - [Adding a Group](#)
  - [Editing a Group](#)
  - [Setting Up the Administrator](#)

The user now has a temporary password to log into the firewall.

- 2 When the user logs in, the firewall asks the user to update the password followed by a QR code along with instructions to install the Google Authenticator. (Refer to [Authenticating with the Firewall](#) for more information.)
- 3 The user follows the instructions and the TOTP is enabled for two-factor authentication.

## Adding a New User with 2FA

*To add a new user with two-factor authentication:*

- 1 After logging into the SonicOS firewall, navigate to **MANAGE | System Setup | Users > Local Users & Groups**.
- 2 Click **Add**.

- 3 Setup the **Name**, **Password**, and **Confirm password** as you would for a normal user.
- 4 Check the box for **User must change password**. This ensures that the user must change the password when they log in the first time.
- 5 In the field for **One-time password method**, select **TOTP**.
 

**NOTE:** If you click on **UNBIND TOTP KEY**, the QR code that was used to setup TOTP is no longer valid for that particular user.
- 6 Add the user's **Email address**.
- 7 In **Account lifetime**, choose how long you want this user's settings to last. The example above shows a 15-day life. You can choose a set number of minutes, hours or days, or you can choose to have it never expire.
- 8 Add a **Comment**, if desired.
- 9 Click **OK**.

## Editing 2FA for a User

Editing a user is very similar to adding a new user.

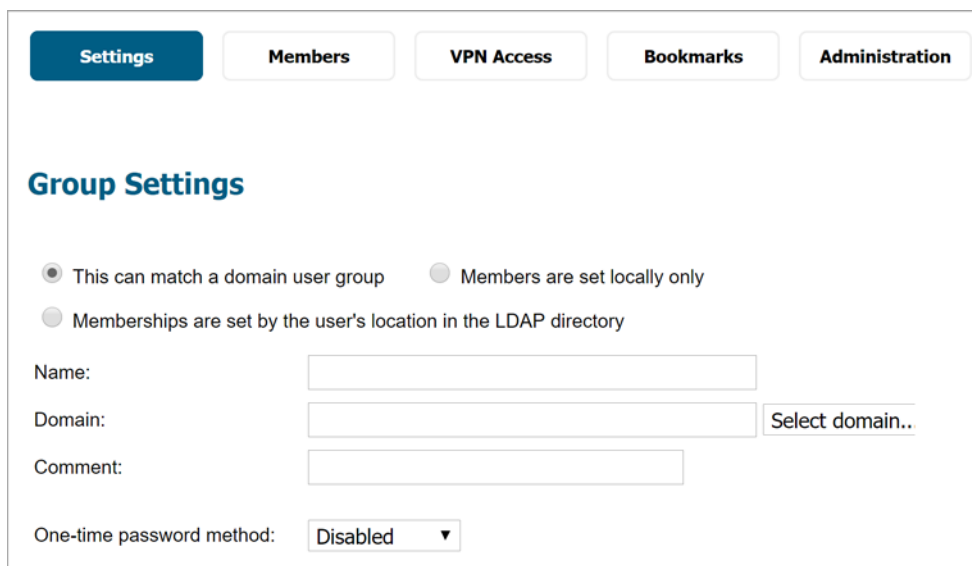

*To change 2FA for an existing user:*

- 1 After logging into the SonicOS firewall, navigate to **MANAGE | System Setup | Users > Local Users & Groups**.
- 2 In the table, select the user that you want to edit by checking the box on the left.
- 3 Click the **Edit** icon in the **Configure** column.
- 4 Check the box for **User must change password**. This ensures that the user must change the password when they log in the first time.
- 5 In the field for **One-time password method**, select **TOTP**.
- 6 Click **OK**.

## Adding a Group

*To add a new user group with two-factor authentication:*

- 1 After logging into the SonicOS firewall, navigate to **MANAGE | System Setup | Users > Local Users & Groups**.
- 2 Select **Local Groups** at the top of the table.
- 3 Click **Add**.

The screenshot shows the 'Group Settings' configuration page in the SonicOS interface. At the top, there are five tabs: 'Settings' (active), 'Members', 'VPN Access', 'Bookmarks', and 'Administration'. Below the tabs, the 'Group Settings' section contains three radio button options: 'This can match a domain user group' (selected), 'Members are set locally only', and 'Memberships are set by the user's location in the LDAP directory'. There are three text input fields: 'Name', 'Domain', and 'Comment'. The 'Domain' field has a 'Select domain..' button to its right. At the bottom, there is a dropdown menu for 'One-time password method' currently set to 'Disabled'.

- 4 Configure the group settings as you would for any group on the firewall.
- 5 In the field for **One-time password method**, select **TOTP**.
- 6 Click **OK**.

## Editing a Group

Editing a group is very similar to adding a new group.

*To change 2FA for an existing group:*

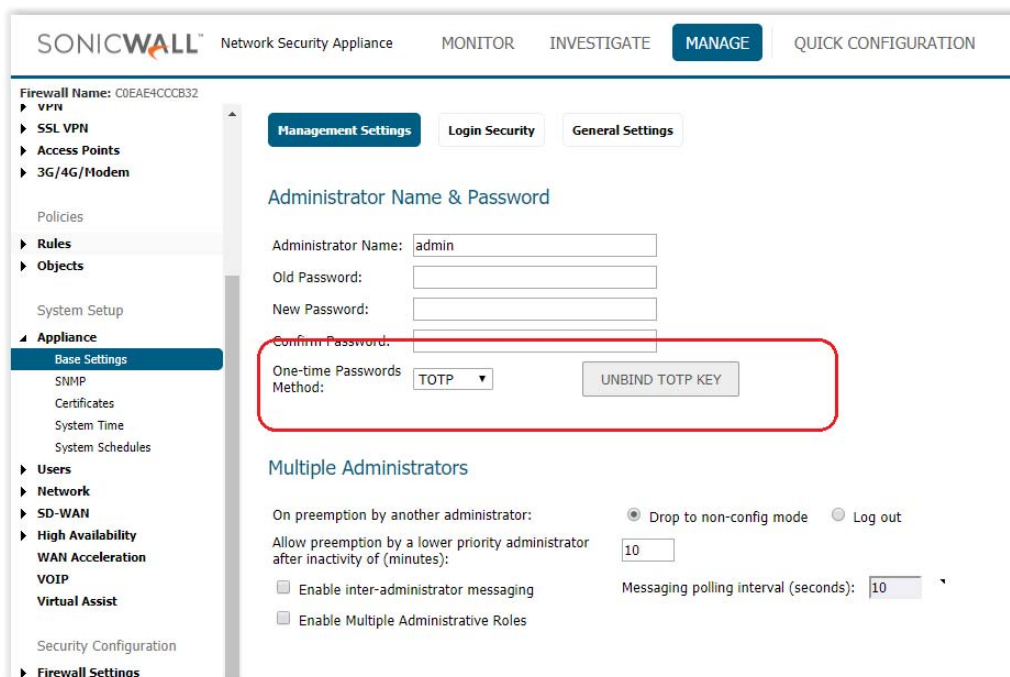

- 1 After logging into the SonicOS firewall, navigate to **MANAGE | System Setup | Users > Local Users & Groups**.
- 2 Select **Local Groups** at the top of the table.
- 3 Click the **Edit** icon in the **Configure** column for the group you want to change.
- 4 In the field for **One-time password method**, select **TOTP**.
- 5 Click **OK**.

# Setting Up the Administrator

Beginning with SonicOS 6.5.4, two-factor authentication applies to the built-in administrator as well.

*To set up two-factor authentication for the administrator:*

- 1 After logging into the SonicOS firewall, navigate to **MANAGE | Appliance | Base Settings**.
- 2 Select **Management Settings** at the top of the table.

- 3 Set up the administrator parameters as usual.
- 4 In the **Administrator Name & Password** section, select **TOTP** for **One-time Passwords Method**.

**i** | **NOTE:** If you click on **UNBIND TOTP KEY**, the QR code that was used to setup TOTP is no longer valid for that particular user.

- 5 Click **Accept**.

# Authenticating with the Firewall

*After setting up for two-factor authentication:*

- 1 Log in from the user interface on the firewall, using the temporary password that was assigned to you. A window similar to the following appears, and you are prompted to change your password:

- 2 Install Google Authenticator on your phone.
- 3 Scan the QR code or enter the text code.
- 4 Type the PIN from your phone in the **2FA Code** field.
- 5 Click **OK**.
- 6 Follow the link to complete your login.

**NOTE:** Store your emergency scratch code in a safe place away from your phone. It is the only way to log in if you lose your mobile phone.

# SonicWall Support

Technical support is available to customers who have purchased SonicWall products with a valid maintenance contract and to customers who have trial versions.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. To access the Support Portal, go to <https://www.sonicwall.com/support>.

The Support Portal enables you to:

- View knowledge base articles and technical documentation
- View video tutorials
- Access MySonicWall
- Learn about SonicWall professional services
- Review SonicWall Support services and warranty information
- Register for training and certification
- Request technical support or customer service

To contact SonicWall Support, visit <https://www.sonicwall.com/support/contact-support>.
