

LEADING BUSINESS SCHOOL EASES OPERATIONS WITH SONICWALL

ESIC centrally consolidates management of all security services through SonicWall

ESIC Business & Marketing School was founded 54 years ago, being the first business school specialized in Marketing in Spain. Today, the school continues to train professionals in Marketing, Management, Digital Disciplines and Entrepreneurship.

Business need

ESIC needed to centralize its security management to provide a more cost-effective solution. Their intention was to consolidate all security services into a single device from a single manufacturer.

Solution

ESIC unified its perimeter security at its main campus in Madrid with a SonicWall NSa 5650 in high availability. At larger campuses in Valencia and Barcelona they deployed NSa 3650 firewalls. At smaller campuses throughout the country, they deployed TZ600 UTM firewalls. In addition, the school generated secure tunnels (VPN) between the sites and consolidated the management of all services using the central console of Capture Security Center.

Benefits

- Simplicity of security management
- Significant reduction in acquisition investment and operating costs

Solutions at a Glance

- [Network Security appliance \(NSa\): NSA 5650 and NSA 3650](#)
- [TZ600 Integrated Threat Prevention Platform](#)
- [Capture Security Center](#)

“After more than 10 years with SonicWall's security solutions, we are pleased with the reliability of their devices, the simplicity of their unified management, the technical support and the optimal value for money.”
