

LABORATORY CARLOS CHAGAS ADOPTS SONICWALL TO FOCUS ON ITS EXPANSION

Project helped the laboratory to excel in its segment, both for the IT infrastructure and high level of security

Business Need

Carlos Chagas Laboratory sought ways to process its medical reports in a faster and safe way for patients, in addition to establishing a high performance connectivity between its 12 units without interruptions or problems related to service availability.

Solution

To ensure performance and especially security, a fundamental requirement of this new infrastructure, the project envisaged to adopt integrated security layers using the SonicWall Next Generation Firewalls at Headquarters and other units, which now have advanced capabilities against potential threats against sensitive data related to the patients of this Laboratory. This project was an important piece of the expansion from Carlos Chagas businesses, where SonicWall network security solutions were instrumental in protecting and ensuring full protection and availability of internal services, but above all, for their customers through the internet.

Benefits

- Efficient access to internal and external services
- High performance communication between all units
- Protection against unauthorized access
- Continuity of services
- Integrated security

Solutions at a glance

Hardware: SonicWall NSA 2600, TZ300 and SonicWall SOHO

Serviços: CGSS (Comprehensive Gateway Security Suite)
