

SCHOOL DISTRICT STRENGTHENS CONTENT FILTERING WITH AFFORDABLE SECURITY SERVICE

Calistoga Joint Unified School District protects its students and budget with SonicWall Security-as-a-Service

Business need

The district sought to upgrade the flexibility and granularity of its existing content-filtering solution, while also keeping costs at minimum.

Solution

Working with trusted SonicWall partner Napa Valley Networks, the district deployed SonicWall Security-as-a-Service (SECaaS), leveraging SonicWall SuperMassive Series next-generation firewall and Content Filtering Service.

Results

“Security-as-a-Service provides more flexibility,” says Burrows. “It is such an improvement to be able to have enough control to differentiate various levels of accessibility.” The district also minimized upfront costs with a flexible monthly security service priced within their budget. Plus, much of the expense was eligible for federal E-rate discounts.

Benefits

- Improved flexibility and customization of content filtering
- Custom content filtering and application control based on user group and roles
- Simplified billing with monthly SECaaS model that aligned with budget
- Upgraded protection against service interruptions
