

CHURCH OF THE HIGHLANDS SECURES SERVICES

Church secures networks and data across distributed campuses while retaining high performance

Business need

Church of the Highlands broadcasts live across distributed campuses to 26,000 people a week, with over 4,000 active connections. The church needs to minimize the risk of malicious attacks, without degrading performance. "People trust us and count on us to keep their personal information safe," says Shane Hamlin, IT Manager. "We need to make sure that our systems are completely secure and that no one can access inappropriate content."

Solution

The church has deployed SonicWall TZ, NSA and SuperMassive Series firewalls, Comprehensive Gateway Security Suite and Content Filtering Service.

Results

"We can count on SonicWall to stop every kind of attack on our network, from viruses and hacking to denial-of-service attacks. With the range of security services, we can block attacks every time and protect our congregation from inappropriate online content. We can move large blocks of HD video data between sites without taking a performance hit."

Benefits

- Secures wired, wireless and distributed networks
- Optimizes network performance
- Prevents access to inappropriate web content
