

# RESTORING LAW & ORDER

**Law office hit by ransomware fights back with real-time threat detection and prevention**

## Business need

Iowa attorney Elizabeth Row abruptly discovered she was locked out of her critical customer and case files, a victim of a ransomware attack. “The attacks cost me roughly \$50,000 in remediation costs and productivity,” says Row. She decided to fight back.

## Solution

Working with a local SonicWall partner, Row deployed a SonicWall TZ Series firewall with optional 802.11ac secure wireless networking. She configured the firewall with Advanced Gateway Security Suite, featuring Capture Advanced Threat Protection (ATP) and DPI-SSL. She manages the solution with SonicWall Global Management System.

## Results

Row’s network and data are protected from the latest threats over wired and wireless connections. “It was easy to set up and management is simple. Now I no longer have that vulnerable feeling, which allows me to fear less and focus on what I do best.”

## Benefits

- Bolster security posture in a cost-effective manner
- Protect sensitive information and case files
- Ensure business remains operational
- Add peace of mind
