

WEB SERVICES PROVIDER SPEEDS WAN, SAVES BANDWIDTH

Jenkon uses WAN acceleration to cut bandwidth cost more than 22% annually

Business need

Jenkon needed to accelerate network performance and dramatically reduced multi-terabyte database copy-and-transfer times between Jenkon's co-located production environment and its quality assurance environment 20 miles away.

Solution

Jenkon deployed SonicWall WAN Acceleration (WXA) Series and SonicWall NSA Series next-generation firewall solutions.

Results

"While it used to take us 13 hours to copy our largest client databases because they're so big, it takes just 45 minutes with SonicWall WXA," says Shinsei. WXA also reduces the replication time for the data to propagate between Jenkon's two data centers. As a result, Jenkon has saved more than 22 percent a year in connectivity costs.

Benefits

- Reduced annual connectivity costs by 22%
- Reduced bandwidth requirements by two thirds
- Accelerated database copy transfer times by 94%
- Speeded support turnaround times
- Greater network visibility and granular control

Solutions at a glance

- [SonicWall WXA Series](#)
- [SonicWall NSA Series](#)

"We're able to pay for less bandwidth, while getting more performance."
