

MAVIS TIRE PUTS THE BRAKES ON RANSOMWARE ATTACKS

Large distributed retail network stops emerging and encrypted threats with SonicWall network security

Business need

Mavis Tire operates a distributed retail network connecting over 400 stores throughout the Northeast U.S. “The threats against this business are real and we take proactive steps to fight off malicious attacks. With over half of malware being encrypted today, it is important that our firewalls can inspect all forms of traffic coming into the data center,” says Ed Schwartz, CIO.

Solution

As a distributed enterprise, the company has SonicWall TZ firewalls in each location, which send all data back to the main network. That network, in turn, is secured by SonicWall NSA firewalls in high-availability configurations. “Outside of SonicWall Gateway Security on the firewall, we run Capture Advanced Threat Protection to examine suspicious files within SonicWall’s multi-engine environment to stop unknown threats,” says Schwartz.

Results

“We’ve used SonicWall for many years because of its ease of use and high security effectiveness,” says Schwartz. “Because of SonicWall’s Capture technology, we have been successful. It stops ransomware from hitting our network.”

Benefits

- Blocks ransomware and other unknown threats before they enter network
- Ease of use
- High security effectiveness
