

# Executive Brief: Uncover your risk profile

What's happening on your network?

## Executive Summary

Cyber reconnaissance and exploitations continue to infiltrate current cybersecurity operations. As a result, organizations are struggling to keep pace, plan and prepare their network defenses. How do organizations defend against what they don't know? To prevent cyber threat surprises, an organization must know everything that traverses its network infrastructure so it can make better-informed decisions. Performing a routine security review is a necessary step toward gaining a holistic, big-picture view of the security ecosystem. This helps identify potential security gaps and aids in defining the appropriate defensive strategies.

## Make informed security policy decisions based on time-critical and consolidated threat information

The SonicWall Application Risk Management Report (SWARM) is designed to help every organization perform timely, actionable intelligence gathering across the entire threat spectrum. SWARM Reports accurately identify real-time vulnerabilities, exploits, intrusions and other network-based threats targeting specific areas of an organization's security infrastructure.

How do you defend against threats you can't see? In order to prevent cyber threat surprises and make better-informed defense decisions, you need to know everything that traverses your network infrastructure. Let our assessment report show you what's missing.

**The SWARM Report enables an organization to:**

1. Understand the multitude of threats it faces and prevent security surprises
2. Identify security gaps and be prepared for emerging threats
3. Make better-informed security investment and policy decisions
4. Provide visibility into application and user traffic – including top applications, users and URL categories and session counts
5. See an accurate analysis of current network activity and security profiles via our Threat Index score
6. Turn its IT team into a “Department of Yes” that encourages innovation and drives growth while still ensuring security and compliance
7. Use a no risk, no cost program that is non-intrusive or disruptive to network traffic and produces a detailed and actionable report for overall security strategy

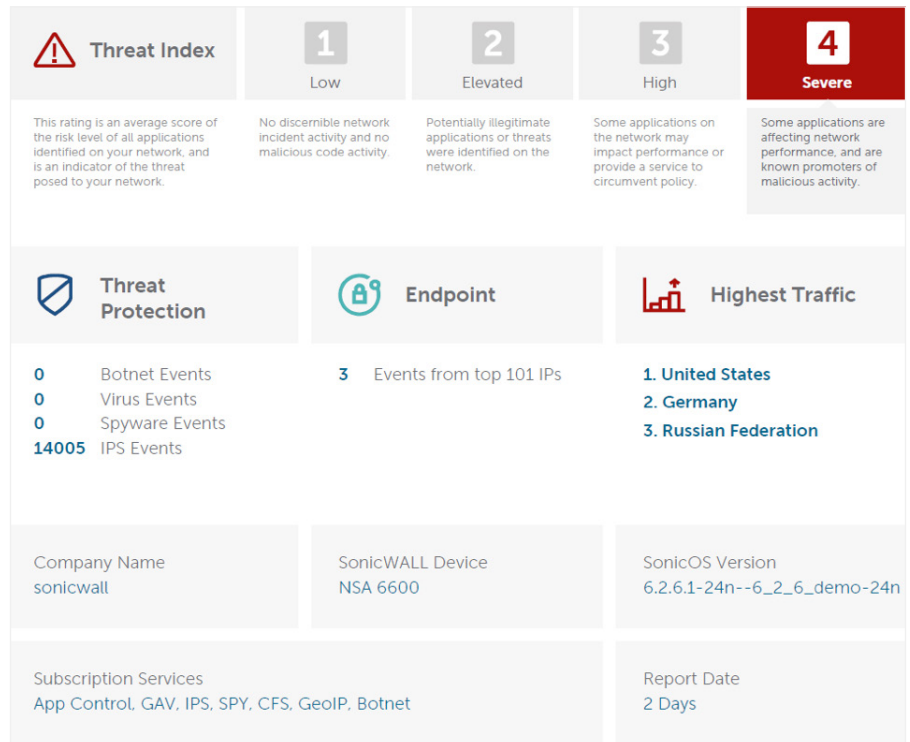

**SonicWall Threat and Risk Assessment Service**

The SWARM Report features a complete snapshot-in-time of known and unknown (zero-day) threats that have been identified by SonicWall next-generation firewalls and Capture Advance Threat Protection services. The report also provides insight into application and user traffic on your network, including top application traffic, users and URL categories, as well as session counts.

**Conclusion**

SonicWall threat and risk assessment service ensures that deep threat intelligence insights reach the right people in your organization at the right time, so that informed security decisions can be made to reduce your risk profile.

## About Us

Over a 25 year history, SonicWall has been the industry's trusted security partner. From network security to access security to email security, SonicWall has continuously evolved its product portfolio, enabling organizations to innovate, accelerate and grow. With over a million security devices in almost 200 countries and territories worldwide, SonicWall enables its customers to confidently say yes to the future.
