Capture ATP sandbox is powered by multiple engines to mitigate the most evasive malware, including costly ransomware attacks.

Sandboxing quickly examines files to stop malware and ransomware — before they enter your network.

SonicWall Real-Time Deep Memory Inspection™ stops zero-day attacks, malicious PDFs and Microsoft Office files, and even chip-based Spectre, Meltdown and Foreshadow exploits.

Capture ATP with RTDMI™ discovered more than 12,300 never-before-seen attack variants so far in 2018.

SonicWall next-generation firewall earned 'Recommended' rating in 2018 NSS Labs Group Test.

Protect Your Organization Now

Talk to your SonicWall SecureFirst partner today to stop malware, ransomware and other advanced cyberattacks. They'll help you upgrade or build a cybersecurity solution that aligns with your specific business needs.

Contact your SonicWall partner or reach us directly at **+1 888-557-6642** to upgrade.
